

Data/Graph Wrap-up

1. How many function families did it take to fit your data to an equation?
2. What factors might affect the population of your animal and the function family for a time period? (Think about your research)
3. For each section of your graph, list the date range, the function family, and the equation you came up with. Then describe how human actions would cause that particular change in population. What was happening during this time period? (Additional research may be required)
